3. Key Recommendations for Domain & Hosting Setup

- **Domain Purchase:** Buy the domain on GoDaddy or Namecheap under a dedicated business account. Uncheck all GoDaddy up-sells (no email hosting, no website builder, no paid SSL).
- **Zero-Cost Vercel Hosting:** Connect the GitHub repository directly to Vercel. Point GoDaddy's DNS A Record (76.76.21.21) and CNAME to Vercel. You will never receive a hosting invoice.
- **14-Day Free Trial Strategy:** The current preview is live on GitHub Pages at zero cost. If the client declines at Day 14, you have invested ₹0.00 in external fees.
